

# Netrisk Consulting: Helping SMEs Streamline Accounting and Boost Business Success

Running a small to medium enterprise comes with daily challenges that can disrupt operations. Many business owners struggle with managing finances, maintaining compliance, and implementing efficient accounting systems. Netrisk Consulting focuses on solving these issues directly. They provide computerised accounting systems, training on business functions and subject matter, assistance with compliance, Enterprise and Supplier Development programs implementation and support, business viability analysis, costing and pricing strategies and assessments, risk management and compliance related systems and programs.

## **Tailored Accounting Services for SMEs**

Netrisk Consulting helps SMEs set up and manage accounting systems that match their operational needs. The company supports platforms such as IQ Retail (ERP Go), Sage Accounting, Smart-IT, QuickBooks Online, Aronium, and TurboCash. By working with multiple software systems, Netrisk ensures that clients get the solution best suited for their business type and size, and not just a generic system. Systems should adapt to business, not the other way around. They guide clients through setup, training and ongoing support, making it easier for SMEs to maintain accurate financial records and manage daily transactions. They enable owners and managers to use their actual data for reporting and decision making purposes, thereby enhancing profitability and sustainability of the business.

The company also provides cloud hosting solutions, domain registration, web sites, cloud backup and related products. The servers are located within the geographical areas of South Africa, ensuring businesses maintain compliance with local laws, including the POPI Act. Hosting data locally improves accessibility and reliability, while also protecting sensitive financial information. Clients can monitor transactions, track inventory, and generate reports without worrying about interruptions or data security risks.

## **System Implementation and Staff Training**

In addition to software setup, Netrisk trains business owners and staff to use their systems effectively. They provide practical guidance on running operations, generating reports, and maintaining records. This approach reduces errors and allows businesses to rely on their systems to manage finances accurately. SMEs can track cash flow, monitor expenses, and plan for growth, all through platforms implemented by Netrisk.

Transitioning from manual bookkeeping or outdated systems to computerised accounting can be complex. Netrisk simplifies this process by taking a hands-on approach. They install the systems, tailor them to business needs, and ensure staff understand how to use them efficiently. This reduces downtime and prevents mistakes that can lead to compliance issues or financial inaccuracies.

By combining accounting services with system implementation, Netrisk provides SMEs with a single solution that covers both operational and technical needs. Clients no longer need to coordinate between multiple providers, saving time and reducing the risk of miscommunication.

---

## **Integrated Solutions That Stand Out**

When SME owners seek accounting solutions, they often face options that provide either software installation or professional accounting services, but rarely both. Netrisk Consulting addresses this gap by offering an integrated approach. Clients receive both technical implementation and ongoing accounting support under one roof. This eliminates confusion and ensures consistent results. Netrisk also engage with the existing accounting or auditing firm of the business, and does not replace it, but rather enhance the effectiveness and efficiency of management.

Netrisk focuses specifically on the SME sector. They recognise the need for systems that manage finances while also supporting compliance and strategic planning. This focus allows the company to deliver solutions that align with business realities, avoiding unnecessary features or complex workflows that larger enterprises may require.

## **Expertise Across Platforms and Services**

Another point of distinction is their expertise across multiple software platforms. Clients gain flexibility in getting the system that best suits their workflow, whether it is IQ Retail, Sage, QuickBooks Online, Aronium, or TurboCash. Each platform receives the same level of attention during setup, training, and support. This breadth of expertise ensures that businesses avoid system limitations and can scale their operations as they grow.

Netrisk also combines technical services with consulting and training. Beyond installing a system, they educate staff on using it effectively and maintaining compliance with financial regulations. Training covers reporting, record keeping, and daily operations. Clients can make informed decisions and reduce the risk of errors, which is crucial for SMEs that often operate with limited resources.

Netrisk can also supply complete Point of Sale systems, including the hardware required, ensuring a complete turnkey solution. This includes the related hardware including computers, printers, scanners, till drawers, label printers and even networking where required. A business can go from non-operational status to fully functioning business environment with a single service provider.

Additionally, Netrisk provides cloud hosting and dedicated servers within South Africa. Competitors may rely on generic cloud providers or offer minimal support for data security. Netrisk ensures local hosting, accessibility, and compliance with the POPI Act. Clients can trust that their financial and operational data remains secure, easily retrievable, and legally compliant.

Finally, Netrisk is not just an accounting system provider. Netrisk builds long-term relationships with clients. They provide ongoing support, training, and consulting to address changes in business operations or regulations. Competitors often offer one-time installation or limited accounting services, leaving clients to manage gaps on their own. With Netrisk, SMEs receive continuous guidance to maintain efficient, compliant, and accurate accounting processes, enhanced by related support services. Netrisk does not see itself as just another service provider, but a partner to a business which needs to be profitable and sustainable.

## **Addressing SME Pain Points**

SMEs face several recurring challenges that can hinder growth and profitability. One major issue is the lack of proper accounting infrastructure. Many small businesses rely on spreadsheets or outdated software, which leads to errors and wasted time. Another issue, which can even be more dangerous, is using an accounting system that is not the right fit for a specific business. A system which can be brilliant for an accountant might cause a retail business to fail. In the retail environment, inventory management is absolutely crucial to ensure profitability, stock is absolutely critical, whereas in a service industry it might be totally irrelevant. In business, one size does not fit all.

The system that is used in a business should adapt and support that specific business, the business should not be adapted to the accounting system. Netrisk resolves this by implementing computerised accounting systems tailored to the client's needs. Platforms such as IQ Retail (ERP Go), Sage, Aronum, Turbocash, Smart-IT and QuickBooks Online automate data entry, track inventory, and generate accurate financial reports.

Compliance represents another challenge. SME owners often struggle to keep up with legislation and financial regulations. This includes data hosting, which is regulated by the POPI Act. Netrisk provides cloud hosting, email backups, and dedicated servers in South Africa, ensuring that all data is secure and compliant. Clients no longer worry about legal penalties or lost information.

## **Consulting, Training, and B-BBEE Support**

Business consulting and strategy gaps also affect SMEs. Many owners lack guidance on costing, break-even analysis, or corporate governance. Netrisk addresses these needs by offering consulting services alongside accounting and system implementation. They help businesses plan for profitability, evaluate operational efficiency, and maintain proper records. Clients gain insights that allow them to make decisions that directly impact growth and sustainability.

Training represents an additional pain point. Staff often struggle to use complex accounting systems or understand financial reporting. Netrisk provides hands-on training for a number of computerised accounting systems, strategic and planning sessions, and training on various business related subject matter. These interventions ensure that management and staff has the skills set to manage everything for daily operations to long term implementations efficiently.

B-BBEE compliance and enterprise development create further complexity for SMEs. Netrisk provides consulting services for B-BBEE exempt certificates, Enterprise & Supplier Development strategies, and Socio-Economic Development support. Businesses receive guidance to maintain compliance while leveraging opportunities for growth and partnerships.

## **Streamlining Operations with One Partner**

SMEs often deal with multiple service providers for software, accounting, and consulting, creating coordination challenges. Netrisk consolidates these services into one provider. By handling accounting services, system implementation, consulting, and training, they reduce administrative burdens and streamline operations. Clients save time and ensure that each aspect of their financial management works together seamlessly.

Through these targeted services, Netrisk solves the core challenges SMEs face daily. Businesses gain accurate financial data, secure hosting, regulatory compliance, and operational guidance. They can focus on growth and efficiency rather than troubleshooting financial or system-related issues. Netrisk delivers practical, measurable solutions that directly improve the operations of small and medium enterprises.
